

THE OPPORTUNITY

This client wanted to spare no expense when building a state-of-the-art, award worthy home theatre. What started off as a home theatre project, soon expanded into a whole home automation project.

A beautiful 6000 SQ FT house located on the outskirts of Brampton, custom built with all the luxuries of a modern home.

House 21 - Brampton

Home Theatre & Home Automation

The Infinite team was well prepared for this Control4 project. The client relied on our team to build his dream home theatre. Infinite was also tasked with designing the room. Partnered with our in-house designers from The Design Corp, a sister company to Infinite, we were able to design a one-of-a-kind experience, with DMX lighting, fibre optic lighting, "Tron Beam" lighting, raised flooring and Dolby Atmos Sound.

Aside from the home theatre, Infinite automated lighting across the 7000 square foot home with Control4 light dimmers. The unique factor with this was the google home integration to Control4, allowing the client to voice activate and deactivate all the lights in his home.

Security is important when it comes to any home and the Infinite team does not take it lightly. We always turn to our most trusted brand, Hikvision, when it comes to Cameras. Hikvision provides the clearest 4K image from its lenses. Coupled with our Ubiquiti network and mesh wifi with dual wan redundancy, the home's security is sure to stay online.

IMPLEMENTATION

- **Control4**
